Rocking Notes (Python Project)

In this project Registration, Login and CRUD is the main functionality. Technology is using Python Flask Framework, JWT token, React Js. Sqlite Database and API tesing use Postman.

The project covert subdirectory for the easiest to way builds the project. A project run from app.py file, models.py, routes.py, __init__.py push into todo app. Create database class in models.py, __init__.py file load the project, routes.py handle CRUD and Registration functionally.

_init__.py :

All project files and packages are loaded in __init__py.

Models.py :

User class Database user for login and registration. For CRUD functionality user Todo class Database

routes.py:

In routes.py directory handle all logic functionality. Login with a Token, Create a post, View all post items, Delete the post, and JWT Token Implement in this file.

React:

Create react project for the front end. Router.jsx manages all routes from Flask Application. Home, Registration, Login, Update in Pages Directory.
